

## OPIS - PILE INSERTION SYSTEM

### Labored saving automation equipment automatically fills extruded lineals

Inserts Ultrafab's standard Ultra-Loc<sup>®</sup>, Ultra-Fill<sup>®</sup>, and Ultra Pro<sup>®</sup> weatherseal backings into vinyl sash and frame lineals during the extrusion process.

### EQUIPMENT FEATURES:

- Operates mechanically without electrical power or compressed air
- Mounts directly in line with the extruder and will not affect line speed
- Durable mechanical design is lightweight and easy to install
- Customizable for all sash and frame shapes
- OPIS can accommodate up to six roll-in wheels to fill six T-slots without modifying the equipment
- Custom configurations are available and are able to accommodate extra large profiles
- Enables extruders to ship pre-filled lineals to fabricators with minimal additional labor
- **Electrical:** None
- **Air Pressure:** None
- **Dimensions:** 11" H x 11" W x 14" L
- **Weight:** 40 lbs.
- **Custom Sizes Available**
- Training and technical assistance are included with every machine – equipment is available on loan to every customer using over one million of Ultrafab's product annually

Reel stands available at an additional cost.
